

Background

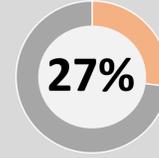

The findings from the Healthcare Experience Survey (2013-2016)¹ conducted by the Ministry of Health and Long-Term Care illustrate that in Waterloo Wellington:

34% of residents were advised by their health care provider to see a specialist in the past 12 months

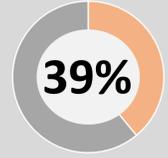

Length of time residents waited to see the specialist

> 90 days

30 to 89 days

< 30 days

Based on a national physician survey, the referring process poses common frustrations for referring primary care providers (PCPs), including: finding an available specialist, no receipt of referral, not being informed of appointment times, and no information for follow-up treatment.² For a PCP clinic, this can translate into additional staff work to confirm receipt of referral, relay information between specialist and patient on appointment times, and track information on treatment plan post-specialist visit. The availability of eConsults has shown promise in satisfying PCP needs for quick access to helpful information, enhancing the quality of patient care and avoiding a referral to a specialist.^{3,4}

Dr. Yeung, a PCP at a Waterloo Family Health Organization, adopted OTN eConsult in January 2017, and uses it approximately three times per month to provide timely treatment decisions for patients. In one instance, when a patient came to an appointment with lab results in the “grey zone”, Dr. Yeung was able to consult a nephrology specialist who provided her with an expert explanation that she could relay to the patient within a few days, thereby reducing patient anxiety regarding the treatment plan. Dr. Yeung can now use this knowledge with her future patients as well. In another example, Dr. Yeung used eConsult with a urologist to determine whether a calcification in the testicles put a patient at risk for testicular cancer. The specialist informed her of the most recent evidence and she was able to confidently follow up with the patient without needing a referral to the urologist. Both of these examples highlight timely access to specialist information and a reduction in the need for referral.

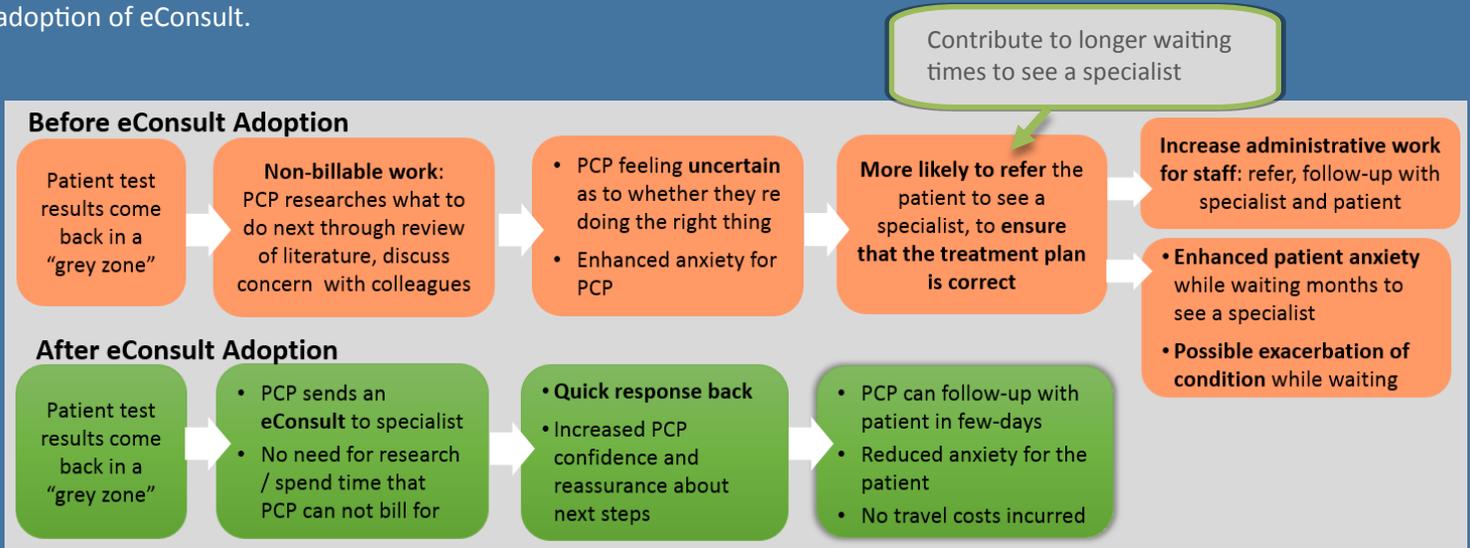

eConsult facilitates prompt access to and communication between primary care providers and specialists, allowing for better-informed recommendations for the PCP and timely advice and reassurance to patients. This reduces not only unnecessary referrals to specialists, but also patient anxiety and expectations for urgent referrals.

“eConsult has changed my practice in such a positive way. There are so many situations where a patient really doesn't need to see a specialist face-to-face, and the physical exam won't change their management. eConsult is perfect for these situations. It takes me about 5-10 minutes to send off depending how complex the case is, and I typically get a response within a couple days. It reduces staff workload, I'm able to communicate to patients quickly which alleviates anxiety, and it makes me more confident that I'm properly managing the case. The fact that you're paid for the time you put in doesn't hurt either!”

- Dr. Alison Yeung, Waterloo FHO

What were the benefits?

The figure below illustrates Dr. Yeung's experience before the adoption of eConsult, and benefits experienced after the adoption of eConsult.

According to Dr. Yeung:

Specialists reply to eConsults in **days, NOT months**

≈ **8/10 eConsults**

that she conducted to date **avoided referrals to specialists**

Specialists receive more appropriate referrals

Specialists can bill for the time

Program description

QBIC (Quality Based Improvements in Care) is a program hosted by the eHealth Centre of Excellence in the Idea Quarter of Waterloo, Ontario.

The objective of QBIC is to improve the health and wellness of Waterloo Wellington residents by supporting primary care clinicians to realize greater value out of existing ehealth technologies.

The program's highly qualified team of Change Management Specialists offer free ehealth coaching sessions and workshops to clinicians across the region, either one on one, or in a group. They also work with system partners — such as the Ontario Renal Network, Cardiac Care Network, and Centre for Effective Practice — to develop EMR decision support tools integrating best practices.

For more information on QBIC's range of services, please contact QBIC Program Manager Danika Walden, at Danika.Walden@ehealthCE.ca. A full catalogue can be found at: www.ehealthce.ca/QBIC.
